DETAILED ACTION

Drawings

1. The drawings were received on 11/10/09. These drawings are accepted.

Allowable Subject Matter

2. Claims 17-24, and 28-35 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Re claim 17, the independent claim includes "wherein the load-application device comprises three pushers configured to exert on each of the respective support parts a force that is substantially normal to the axis of rotation of the central test piece, each pusher being driven by an actuator comprising a hinged arm secured at one end to a stationary portion of the tribometer, and at its other end to a moving drive member; and a load-sharing device for controlling the displacement of the drive members, wherein each drive member is secured to a drive pulley, and by the fact that the load-sharing device comprises a belt engaged on the three drive pulleys, the load-sharing device being configured to exert variable tension on the belt. " in combination with the remaining claim limitation is not taught and/or made obvious by the prior art. As depicted in figs. 1 and 2, Corrias et al., considered closest to related art, teaches a first support assembly (22-26, and 38) receiving a central test piece (e.g., central specimen 41), and to drive (e.g., gear train 38) it in rotation about its axis (Col. 5, lines 60-67). a second support (e.g., module 8) is configured to receive three peripheral test pieces (e.g., peripheral specimens 51) and to enable the central test piece (e.g., central specimen 41) to

Art Unit: 2856

come simultaneous into contact with the three peripheral pieces (51) (Col. 4 lines 37-38), such that while being driven in rotation (e.g., gear train 38) the central test piece (e.g., central specimen 41) can rub against the three peripheral test pieces (51) (Col. 4, lines 37-67; Col. 5, lines 60-67). The second support assembly (e.g., module 8) comprises three support parts (e.g., slides 59) each carrying a respective peripheral test piece (e.g., peripheral specimens 51) (Col. 4, lines 51-52). The three support parts (e.g., slides 59) are movable relative to the other two (Col. 5, lines 49-53). **Corrias et al. does not teach a load-application device comprises three pushers configured to exert on each of the respective support parts a force that is substantially normal to the axis of rotation of the central test piece, each pusher being driven by an actuator comprising a hinged arm secured at one end to a stationary portion of the tribometer, and at its other end to a moving drive member; and a load-sharing device for controlling the displacement of the drive members, wherein each drive member is secured to a drive pulley, and by the fact that the load-sharing device comprises a belt engaged on the three drive pulleys, the load-sharing device being configured to exert variable tension on the belt.**

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
